INTEGRATED PHOTODEVICE AND WAVEGUIDE

ABSTRACT

A waveguide including a waveguide core having a top

5 surface that defines an angle. A waveguide can include a
waveguide core offset from a substrate by a cladding layer.

A phototransistor includes an emitter, a collector, and a
base in lateral alignment. A photodiode includes n- and ptype regions and an intrinsic substrate portion in lateral

alignment. A waveguide includes a waveguide core, an attenuating layer, and a detector layer. A method for fabricating a device includes forming a cladding layer over a substrate having a detector layer formed thereon; forming an opening in the cladding layer to expose the detector layer; forming a waveguide layer over the cladding layer and the opening; removing a portion of the waveguide layer to define a waveguide core; and implanting first and second regions into the detector layer proximate the waveguide
